

PROJECT	Credit Card Approval Prediction	TEAM	AI/ML Program
DOCUMENT	Empathy Map	DATE	July 2026

Empathy Map

An empathy map was created to understand the perspective of the primary users of this system: bank credit analysts, compliance officers, and prospective customers.

Says

- "I need to process applications faster without compromising accuracy."
- "I want to know if I am likely to be approved before I formally apply."
- "We need a consistent, unbiased way to flag high-risk applicants."

Thinks

- Is this applicant a repayment risk based on their financial history?
- Am I spending too much time manually reviewing low-risk applications?
- Will I get rejected and not understand why?

Does

- Manually cross-checks income, employment, and credit history for every application
- Batch-screens applicants with past-due loan records for compliance review
- Fills out financial details to check eligibility before formally applying

Feels

- Frustrated by slow, repetitive manual review processes
- Anxious about applying and facing an unexplained rejection
- Reassured by a fast, consistent, and transparent screening process

Pain Points

- Time-consuming manual verification of financial documents
- Inconsistent decisions across different reviewers
- Lack of instant feedback for applicants

Gains

- Faster processing of applications
- Reduced unnecessary rejections through better risk assessment
- A consistent, data-driven decision framework
